Narrative Report: Barangay Potable Water Survey

I. Overview

Over two weekends, 24 JPICE members surveyed household water sources in Barangay Cagbayang and Barangay Malino. Teams recorded each source, measured the distance households walk to it and noted how water is lifted to upland homes. In Malino, residents lift spring water with a hydraulic ram pump built in 2011, which no longer runs during the dry months.

II. Activities Conducted

Date	Activity	Participants	Outcome
Sep 6	Orientation and survey form pilot	24	Survey form shortened to one page
Sep 13	Household survey, Barangay Cagbayang	24	86 households surveyed
Sep 20	Household survey, Barangay Malino	22	71 households surveyed
Sep 27	Data encoding and mapping	10	Water source map drafted

III. Highlights

- 157 households surveyed and every water source mapped.
- The broken hydraulic ram pump in Malino was measured for a repair proposal.

IV. Challenges Encountered

- Rain cancelled the first Malino visit.
- Several households were away during the day.

V. Recommendations

- Propose a repair of the Malino ram pump as next semester's community project.
- Share the water source map with both barangay councils.
